-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

**Period for Reply**

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

**Status**

- 1) ☒ Responsive to communication(s) filed on 17 January 2007.
- 2a) ☐ This action is **FINAL**. 2b) ☒ This action is non-final.

## **DETAILED ACTION**

### ***Continuing Data***

The continuing data in the related-applications section (i.e. page 1, 1st paragraph) of the specification needs to be updated because US Application Number 10/648559 has issued as US Patent Number 7,166,217 B2.

### ***Claim Rejections - 35 USC § 102***

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claims 1-29 are rejected under 35 U.S.C. 102(e) as being anticipated by U.S.

Publication Number 2004/0026341 A1.

The applied reference has a common assignee and three common inventors with the instant application. Based upon the earlier effective U.S. filing date of the reference, it constitutes prior art under 35 U.S.C. 102(e). This rejection under 35 U.S.C. 102(e) might be overcome either by a showing under 37 CFR 1.132 that any invention

Art Unit: 1723

disclosed but not claimed in the reference was derived from the inventor of this application and is thus not the invention "by another," or by an appropriate showing under 37 CFR 1.131.

Claims 1-29 are rejected under 35 U.S.C. 102(e) as being anticipated by U.S. Publication Number 2004/0026341 A1 who discloses an apparatus for separating blood into, red blood cells, platelets and plasma, the apparatus comprising: a centrifuge (34) having a motor (16) and a rotor (1) including a first rotor portion defining a ring shaped area (3) receiving a blood separation bag (4) and a second rotor portion defining a central chamber cavity (2) receiving a platelet collection bag (33'), a plasma collection bag (33'') and a red blood cell collection bag (33'''); a squeezing system (page 26) for squeezing the separation bag and pumping centrifugally separated platelets, plasma and red blood cells to their respective collection bags (33', 33'', 33'''), the squeezing system including a pump (80); and a controller (68) (see page 31) including a processor having programmed instructions provided by ROM and/or RAM, the controller (68) communicating with the pump (80), the motor (16), a pressure sensor (70), a first optical sensor (52), a second optical sensor (55) and a valving structure (72).

### ***Response to Arguments***

Applicant's arguments filed on January 17, 2007 have been considered but are moot in view of the new ground(s) of rejection.
